Adam Allie, a 37-year-old substitute teacher at Grant County High School in Dry Ridge, Kentucky, couldn’t understand why he was feeling so tired during his 10 a.m. planning period one morning in November. He just wanted to put his head down on the desk for a minute but decided instead to join Lynn White, another substitute teacher, in the art room. This decision saved his life.

Adam collapsed mid-sentence, falling off his chair as the two teachers sat chatting. “At first I thought he was joking,” said Lynn. “When he started turning blue and gasping for breath, I realized Adam was in serious trouble. I quickly turned him on his side to avoid aspiration, then called the front office from the school phone and asked for the nurse.”

School nurse Angie Jones raced to the art room with her emergency kit, with Associate Principal John Sanders and Sherry Lawson, RN close behind. Adam was lying on the floor. “I knew the minute I saw him he did not have a pulse,” said Angie. “I could tell by his skin color and the blank expression in his eyes.”

Angie felt for a pulse, shook Adam, and said his name. Nothing. She opened his shirt and tried to hear a heartbeat. Nothing. John called 911. Angie immediately began cardiopulmonary resuscitation (CPR) and asked John to retrieve the automated external defibrillator (AED) down the hall.

Angie and John hooked up the ZOLL® AED Plus® to Adam, and it advised a shock. When everyone was clear, Angie administered the shock. Adam opened his eyes, then went right back out. This scenario happened four more times, with John and both nurses taking turns performing CPR.

“I never had any idea how exhausting giving compressions could be,” explained John. “When Angie was giving compressions, the AED kept saying, ‘Push Harder.’ She couldn’t push deep enough with her compressions, so I took over the CPR. The AED would say, ‘Good Compressions,’ so I kept going.”

Within seven minutes of the 911 call, the paramedics arrived and transported Adam to St. Elizabeth Edgewood Hospital. The doctors believe he went into sudden cardiac arrest from an arrhythmia as a result of untreated high blood pressure. He received an implantable pacemaker/defibrillator to help avoid a similar situation in the future.

There’s No Substitute to Help Save a Life

The ZOLL AED Plus, the first and only Full-Rescue AED that provides Real CPR Help® for depth and rate of chest compressions, audibly coaches rescuers with prompts such as “Push Harder” or “Good Compressions” during CPR.
"At first I was reluctant about AEDs because of the cost and the liability, but then I learned more about them and saw that many schools had them and how valuable they can be."

Grant County School District Health Coordinator
Rhonda Schlueter, RN, NCSN

"I felt helpless not having all the resources of a hospital, but it ended up that we didn’t need all of them," said Angie, who had been a hospital RN for much of her 16-year nursing career. “All we needed was our strength for compressions and the AED, which was incredibly easy to use. It even told us when we needed to push harder in our compressions. It interpreted the cardiac rhythm for us and told us when a shock was needed. I have used a hospital defibrillator many times before but never an AED. I was surprised how easy ZOLL made it.”

A Well-Trained, Well-Prepared District
According to John, who is also director of career and technical education, the goal at Grant County High School is to have every student and as many staff as possible trained in CPR and on AEDs.

The Grant County district requires all high school freshmen—approximately 240 a year—to take health and physical education to graduate. The course includes a unit on emergency procedures that covers CPR and AEDs.
