Shock Delivered Automatically
When the Fully Automatic AED Plus detects a shockable heart rhythm, it delivers the shock on its own, with no rescuer interaction required. No one needs to push a button. Once the heart analysis begins and the Fully Automatic AED Plus prompts, “DON’T TOUCH PATIENT,” if a shock is needed, it will be delivered automatically after a brief verbal countdown. Research shows that safety is not compromised when rescuers use a fully automatic rather than a semiautomatic AED.1

Measuring Chest Compression with Real CPR Help
The force required to depress the chest during CPR varies with the patient’s size and build. The standard measure of chest compression quality, however, is not force but depth. The Real CPR Help® technology in ZOLL’s CPR-D-padz® includes a hand-placement locator, an accelerometer, electronics, and a processing algorithm that work together to measure vertical displacement in space as each compression occurs.

Simplified Placement
Affixing two separate electrode pads to the patient’s bare chest can be confusing to a lay rescuer. ZOLL’s one-piece CPR-D-padz Electrode simplifies this step by guiding placement of the red crosshairs at the center of the imaginary line connecting the patient’s nipples. Once in place, the hand-locator and the two electrode pads fall naturally into optimal position for both defibrillation and CPR.

Five-Year Shelf Life
All AED electrodes transmit defibrillating electricity into the patient via metal in close contact with a salt-infused gel that is positioned between the metal and the skin. Over time, however, the salt in the gel will corrode the metal and eventually compromise electrode functionality. ZOLL’s novel electrode design includes a sacrificial element that prevents significant corrosion for five years, which is unmatched in the market today.
Fully-Automatic AED Plus Specifications

Defibrillator

Protocol: Automatic
Waveform: Rectilinear Biphasic
Energy Selection: Automatic preprogrammed selection
(120J, 150J, 200J)
Patient Safety: All patient connections are electrically isolated
Charge Time: Less than 10 seconds with new batteries
Electrodes: ZOLL CPR-D-padz, pedi-padz® II, or stat-padz® II
Self-Test: Configurable automatic self-test from 1 to 7 days. Default = every 7 days. Monthly full-energy test (200J).
Automatic Self-Test Checks: Battery capacity, electrode connection, electrocardiogram and charge/discharge circuits, microprocessor hardware and software, CPR circuitry and CPR-D sensor, and audio circuitry
CPR: Metronome Rate: Variable 60 to 100 CPM
Depth: 0.75 in. to 3.5 in.; 1.9 to 8.9 cm
Defibrillation Advisory: Evaluates electrode connection and patient ECG to determine if defibrillation is required
Shockable Rhythms: Ventricular fibrillation with average amplitude >100 microvolts and wide complex ventricular tachycardia with rates greater than 150 BPM for adults, 200 BPM for pediatrics. For ECG analysis algorithm sensitivity and specificity, refer to AED Plus Administrator’s Guide.
Patient Impedance Measurement Range: 0 to 300 ohms; nominal energy delivered is impedance adjusted
ECG Circuitry: Defibrillator protected

Defibrillator: Protected ECG circuitry
Display Format: Optional LCD with moving bar
Size: 2.6 in. x 1.3 in.; 6.6 cm x 3.3 cm
Optional ECG Viewing Window: 2.6 seconds
Optional ECG Display Sweep Speed: 25 mm/sec; 1 in./sec
Battery Capacity: Typical new (20°C) = 5 years (225 shocks) or 13 hours continuous monitoring. End of life designated by red X (typical remaining shocks = 5)
Data Recording and Storage: 50 minutes of ECG and CPR data. If audio recording option is installed and enabled, 20 minutes of audio recording, ECG, and CPR data. If audio recording option is installed and disabled, 7 hours of ECG and CPR data.

PC Minimum Requirements For Configuration and Patient Data Recovery: Windows® 98, Windows® 2000, Windows® NT, Windows® XP, Windows® 7, IBM-compatible PIII with 16550 UART (or higher) computer, 64MB RAM, VGA monitor or better. CD-ROM drive. IRDA port. 2MB disk space.

Device

Size: (H x W x D) 5.25 in. x 9.50 in. x 11.50 in. x 24.1 cm x 129.2 cm
Weight: 6.7 lbs; 3.1 kg
Power: User-replaceable batteries. 10 Type 123A Photo Flash lithium manganese dioxide batteries
Device Classification: Class II and internally powered per EN60601-1
Design Standards: Meets applicable requirements of UL

Environmental

Operating Temperature: 32° to 122°F; 0° to 50°C
Storage Temperature: -22° to 140°F; -30° to 60°C
Humidity: 10 to 95% relative humidity, non-condensing
Vibration: MIL Std. 810F, Min. Helicopter Test
Shock: IEC 68-2-27; 100G
Altitude: -300 to 15,000 ft.; -91 m to 4573 m
Particle and Water Ingress: IP-55

CPR-D-padz

Shelf Life: 5 years
Conductive Gel: Polyurethane hydrogel
Conductive Element: Tin
Packaging: Multi-layer foil laminate pouch
Impedance Class: Low
Cable Length: 48 in (1.2 m)
Sternum: Length: 6.1 in (15.5 cm); Width: 5.0 in (12.7 cm); Length, conductive gel: 3.5 in (8.9 cm); Width, conductive gel: 3.5 in (8.9 cm); Area, conductive gel: 12.3 sq in (79.0 sq cm)
Apex: Length: 6.1 in (15.5 cm); Width: 5.6 in (14.1 cm); Length, conductive gel: 3.5 in (8.9 cm); Width, conductive gel: 3.5 in (8.9 cm); Area, conductive gel: 12.3 sq in (79.0 sq cm)
Complete Assembly: Folded Length: 7.6 in (19.4 cm); Folded width: 7.0 in (17.8 cm); Folded height: 1.5 in (3.8 cm)
