Overview

This document describes the steps required for a successful RescueNet Code Review installation. The installer must complete all configuration items described in this document to ensure a functioning system.

Intended Audience

This document is intended for all installers. To familiarize yourself with the steps and items you need to complete the install, read the entire guide before beginning the install.

How to use this document

This guide is divided into sections in the order that the tasks should be performed. The installer must perform the tasks to ensure a successful installation.

Installation Prerequisites

Important! RescueNet Code Review versions preceding 5.8.1 must be manually uninstalled prior to the installation of 5.8.1.

RescueNet Code Review supports Microsoft Window 7, Windows 8.1, Windows 10, as well as Windows Server 2008+. Both 32-bit and 64-bit operating systems are also supported. Any operating system than those listed are not supported. Installing RescueNet Code Review on an operating system other than those listed may lead to an inoperable system and will not be supported by ZOLL Data Systems.

RescueNet Code Review requires .NET 3.5 and the full Microsoft .NET Framework 4.0. Ensure that they are installed prior to running the install. This redistributable package is available for download from ZOLL's website http://www.zolldata.com/c-r-downloads/ or www.microsoft.com.

RescueNet Code Review requires Windows Management Framework 3.0+ and Microsoft Windows Installer 4.5 prior to starting the install. This install package is available at www.microsoft.com.

During the install, RescueNet Code Review installs Microsoft MSXML 4.0 sp3 and Microsoft Visual C++ 2013 x86 automatically.

RescueNet Code Review Standard vs. Enterprise Edition

RescueNet Code Review Standard Edition can be installed without a license key.

RescueNet Code Review Enterprise Edition requires a valid license key. This edition provides access to view 12-Leads and Vital Sign data that could be recorded by the defibrillator as well as additional data entry fields. For more information, see the *RescueNet Code Review Getting Started Guide*.
